COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN ALABAMA, 1928-1937

- By Counties -

Acreage planted to cotton in Alabama during the past 10 years has varied from 2,144,000 acres in 1934 to 3,599,000 acres in 1929. The small acreage in 1934 resulted in large part from acreage reductions under contract with the Agricultural Adjustment Administration. Approximately 816,500 acres of cotton were plowed up under the terms of the first cotton program in 1933.

Yield per acre during the period has varied from 148 pounds in 1932 to 289 pounds in 1937. In 1932 yields were low because of decreased applications of fertilizer and material weevil damage. In 1928, when the yield was only 150 pounds, there was excessive rainfall during April and June, which delayed planting, interfered with cultivation, and favored weevil activity. Yields since 1934 have been relatively high, due to increased use of fertilizer, lower weevil damage, relatively late falls, and the use of the better lands for cotton. The yield in 1937 set an all time record.

Production of cotton is expressed in 500 pound equivalent gross weight bales and has varied from 947,000 bales in 1932 to 1,631,000 bales in 1937. As previously stated, 1932 was a year of low yields and 1937 of record yields.

In general, acreage, yield, and production tended to vary in the counties in conformity with the State, although in some years significant departures occurred, particularly in yield per acre.

The estimates of production are based upon the ginnings within each county as reported to the U. S. Bureau of the Census with adjustments for cross-county movement of seed cotton.

The estimates of acreage planted are based upon the censuses of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, inclusive, and current reports from crop reporters relating to cotton acreage in each year.

The estimates of yield per acre are based upon yields computed from acres and bales reported to the census in census years and upon current reports from crop reporters relating to yield in each year.

The estimates of acreage planted and of yield per acre naturally needed to be reconciled with the estimates of production in such manner as to give a consistent series of estimates of acreage and of yield per acre.

J. C. Garrett,
Agricultural Statistician.
